

WASTEWATER TREATMENT

FOR PAINTING SPRAYBOOTH

CHEMTEC supplies chemicals and equipments dedicated to the water treatment of painting spray booth. Thanks to CHEMTEC process, it is possible to **reduce wastewater discharge and process costs.**

SKIMMERS

With these plants and the specific CHEMTEC chemicals, it is possible to transform the excess paint into insoluble floating sludge that can be removed continuously from the water by the skimmer. **CHEMTEC plants are fully automated, very easy to be used and allow excellent results and very high process efficiency.**

CHEMICAL PRODUCTS

CHEMTEC offers a full range of high-performing chemical products with special formulations for the **industrial wastewater treatment**.

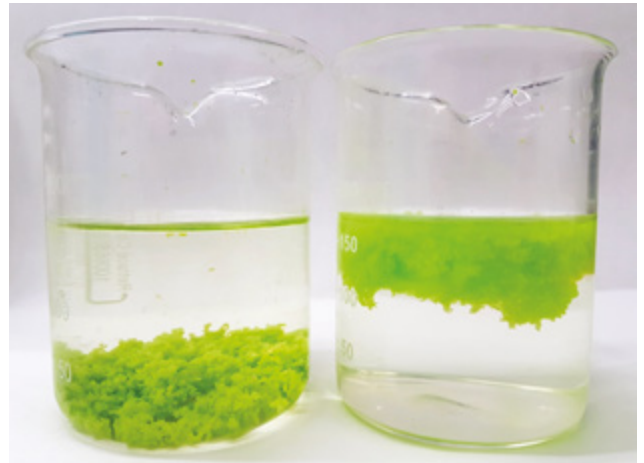

Coagulation and flocculation facilitate the clarification of wastewater by aggregating and flocculating the contaminants' solid particles, making them easier to remove by the skimmer.

CHEMTEC chemical products perfectly work with any kind of solvent based or water born paint or coating and are compatible with any kind of industrial water treatment plant.

Product range includes mineral or organic coagulant, anionic or cationic flocculant, anti-foam, odor removal and pH and hardness correctors.

ADVANTAGES

- High performing chemicals and equipments
- Continuous water purification
- Improvement of painting process efficiency
- Better painting quality
- Easy maintenance
- Waste & water use reduction
- Revamp of existing equipment

Chemtec[®]
Updated tradition.
